

Google Workspace - Direct API

No MCP. No auth expiry. Just works.

Why This Exists

The Google Workspace MCP auth expired every 1-2 weeks, requiring SSH port forwarding to re-authenticate. This script uses the same OAuth credentials with **automatic token refresh** - zero manual intervention.

What It Covers

- **Google Docs** - create (with markdown formatting), list, read
- **Google Calendar** - list upcoming events, create events
- **Google Drive** - list files, upload files
- **Google Sheets** - create (with CSV import), read
- **Gmail** - already handled by check_emails.py + atlas_email.py

Usage

Create a Google Doc

```
google-direct docs create "My Doc" --content file.md --share user@gmail.com
```

List Docs

```
google-direct docs list --query "search terms"
```

Read a Doc

```
google-direct docs read <doc_id>
```

List Calendar (next 7 days)

```
google-direct calendar list --days 7
```

Create Calendar Event

```
google-direct calendar create "Meeting" --start 2026-02-20T10:00 --end 2026-02-20T11:00
```

List Drive Files

```
google-direct drive list --query "search"
```

Upload to Drive

```
google-direct drive upload /path/to/file.pdf
```

Create Sheet

```
google-direct sheets create "My Sheet" --data data.csv
```

Read Sheet

```
google-direct sheets read <sheet_id> --range Sheet1!A1:Z100
```

Location

Script: `~/clawd/scripts/google_direct.py`

CLI alias: `google-direct` (in PATH)

Auto-refreshes expired tokens on every call.
