* This document was formatted with AI assistance. All content, especially assignment outlines and academic decisions, remains the Module Organiser's own work and responsibility: Dr Mahesha Samaratunga

This module is part of QMUL's "Level Up" gamified learning experience, where you can earn XP points for your engagement and progress — turning participation into achievement!

[Find out more here →](#)

MODULE OVERVIEW

Module Organiser: Dr Mahesha Samaratunga

Lecturer: Dr Tina Peterson

INTRODUCTION

This module was originally introduced to support the MSc in Data Science and Artificial Intelligence by Conversion. It is now accepted best practice that programmes in this area include material on ethics in order to ensure that products produced are ethically acceptable and legally compliant.

This module takes a practical approach to the coverage of ethics in Artificial Intelligence and Data Science. It sees ethical considerations as part of a spectrum of concerns, including ethics, but extending through regulation and legal compliance as formal expressions of what is and is not ethical. It considers examples of the kinds of issues that arise in existing systems and uses the UK Government's Ethical Framework as an example of how to embed considerations of ethics into business processes. This module was formulated in 2019 to meet industry needs and to ensure that students had a sound understanding of ethical issues related to AI — Dr Mahesha Samaratunga (MO)

AIMS

This module covers the material on ethics and relevant regulations now required in best practice approaches to programmes in Artificial Intelligence and Data Science. It takes a practical view which aims to provide sufficient knowledge and tools for students to access and design ethical digital products and services. With the module students will understand the dimensions of ethical consideration and relevant regulations, apply data ethic framework and workbooks into accessing and designing programmes, and examine real life case studies in industry.

This handbook is designed to provide you with a comprehensive guide to the module and its assessments. We encourage you to take your time to read through it carefully. Should you have any questions or require clarification, please do not hesitate to email the Module Organiser directly.

WELLBEING SUPPORT DURING THE MODULE: IF YOU'RE STRUGGLING

It's common for PG students to face stress, anxiety, and wellbeing challenges (including flare-ups of existing conditions) especially in their semester B given how intensive the program is. As your module organiser, ensuring you feel fully supported is important to me so that you can thrive academically and personally during this final year.

If you're experiencing wellbeing difficulties or need reasonable adjustments, please get in touch with me directly. (MO/Mahesha)

FOSTERING CRITICAL REFLECTION AND ETHICAL COMPETENCY IN DATA AND AI ETHICS

Although this module serves as an introductory-level exploration of data and AI ethics, it is not designed to simply provide definitive answers to complex ethical questions. Instead, its primary aim is to encourage critical thinking, reflection, and inquiry into the ethical dilemmas and challenges inherent in developing and applying AI technologies.

This module focuses on offering food for thought and sparking curiosity about the key ethical issues that learners may encounter in real-world contexts. Engaging with case studies, theoretical frameworks, and cross-disciplinary insights encourages students to question assumptions, analyse scenarios, and consider the broader societal impacts of AI and data-driven decisions.

This reflective approach helps learners develop the tools to navigate ethical grey areas, fostering the ability to think critically rather than offering pre-defined solutions. As a result, students will leave the module equipped with the foundational knowledge and mindset necessary to adapt, reflect, and act ethically in their professional roles.

This module's ultimate goal is to ignite a journey of lifelong learning and enhance occupational competency. Whether learners are new to the field or looking to formalise their existing knowledge, this module provides a solid foundation for applying ethical principles in practical, industry-relevant contexts. It invites students to continuously reflect and grow as professionals, contributing to a future where technology serves humanity responsibly and equitably.

HOW TO GET THE BEST OUT OF THIS MODULE

It is acknowledged that some of you may come into this module with significant prior knowledge and work experience in data and AI ethics. The hope is that you will still approach this module in a way that benefits you—whether by sparking deeper reflection on complex ethical issues or helping you transition into a leadership role in this field.

Regardless of your work experience or prior academic achievements, this module, though introductory in nature, is designed to provide valuable insights and serve as a steppingstone in your professional journey. We hope that this learning experience will help you get the most out of your expertise and equip you with the critical tools to make informed decisions as you navigate your next career move.

Learners with a High Level of AI/Data Ethics Knowledge/Work Experience

This module allows students to formalise their current knowledge and draw connections between classroom learning and practice.

These learners can use the module to reflect critically on ethical challenges they have encountered in their professional experience, gaining deeper insights into AI's impact.

This reflection fosters high-level occupational competency, preparing them for leadership roles in the ethical implementation of AI.

These learners can also transfer their existing higher-level knowledge into their group and individual assignments, challenging themselves to meet the grading criteria at the highest level.

These learners can use the guest sessions to ask questions of guest speakers based on their higher-level knowledge and use these sessions to further activate their knowledge and reflection, transferring that learning into their group and individual assignments.

Learners with No Formal AI/Data Ethics Knowledge

- The module will serve those learners as an **introduction to the foundational principles** of AI ethics, sparking curiosity and critical thinking about the societal impact of AI and data usage.
- These learners will gain **awareness of key ethical issues**, such as bias, accountability, and transparency, which they can apply when entering roles in AI-related industries and the public sector data driven industries.
- The module bridges the gap between abstract ethical concepts and real-world challenges by focusing on practical case studies.
- Hopefully, this module will ignite curiosity in learners, encouraging them to consider a career shift into AI and Data fields or pursue further studies

International Students

- The module offers a unique opportunity to those learners from abroad to **compare AI/Data ethics and data regulations across different countries**, highlighting cultural and legal variations.

- By examining global case studies, these learners can develop a **holistic understanding** of AI ethics, preparing them for roles in international or cross-border AI projects.
- Engaging in discussions about regional differences promotes **global perspectives** and enriches the learning experience for the entire cohort.
- The module invites you to incorporate your country-of-origin experiences into group and individual assignments by making comparative analyses between the contexts presented in the module and those of your home country. You may also discuss with your lecturer how you can adapt the individual assignment (within reason and within the given assessment outline) to include examples from your home country.

MARKING AND FEEDBACK

Marking for this module will be led by the two lecturers who coordinate the module, and they will act as the primary markers for both CW1 and CW2. All assessments will be marked in line with Queen Mary's Assessment Handbook 2025–26 and the relevant academic regulations, which emphasise consistency, fairness and the use of clear marking criteria.

How Your Work Will Be Marked

- Marking will follow the published criteria for the assessment and the general Queen Mary marking guidelines, including consideration of accuracy and relevance, quality of analysis, use of sources, structure and referencing.
- The process will include more than one round of checking, including internal moderation and benchmarking across the cohort, to ensure that marks are fair and aligned with the standards in the Assessment Handbook.

Nature of Marks in This Module

- Given the nature of a module such as Ethics in AI, it is uncommon for students to receive marks in the 80s and 90s, because the work often involves multifaceted argument, interpretation and judgement rather than a single 'correct' answer.
- Unlike technical modules, there are few definitively correct responses; to be awarded a mark above 70, examiners will be looking for an exceptional level of critical analysis, engagement with multiple perspectives and a well-structured, evidence-based argument.

Distinction-Level Work

- In line with Queen Mary's descriptors, work in the Distinction range (70 and above) should demonstrate a high level of mastery, clear and logical argument, and analysis informed by extensive and relevant reading.
- Marks of 75-80 and above are reserved for work that shows exceptional originality and quality, and such marks are therefore rare across the university and particularly in discursive, essay-based modules.

Academic Judgement and Appeals

- Final marks are approved through School and College examination processes, where collective academic judgement is applied to ensure fair and consistent outcomes.
- Under Queen Mary's appeals guidance, students cannot appeal simply because they disagree with a mark or academic judgement; appeals can only be made on limited grounds such as procedural error or undisclosed, accepted extenuating circumstances. However, students are strongly encouraged to engage with their feedback and to request clarification of marks feedback from the MO. Student should not feel uncomfortable to clarify marks or feedback received. At any point during the module any student can request a 1-1 meeting to discuss any concerns.

ASSESSMENT OVERVIEW

CW1: Individual Assignment (50%)

Submission deadline: **20th March 2026, 5pm**

CW2: Group Assignment (50%)

Submission deadline (Report): **11th May 2026, 5pm**

CW2: Group Assignment (Individual Defense 'Showing the Person Behind the Report')

Pre-recorded Video submission deadline: **12th May 2026, 5pm**

***Students need to sign up to a group in week 5 and by the 4th of February if a group has not been selected by the student – they will be assigned one. No changes can be made after that.**

ARRANGEMENTS FOR CW2: GROUP FORMATION GUIDELINES

Group Formation Guidelines for Coursework 2

- **You must assign yourself to a group by Week 5 via the QMplus link in order to start working on Coursework 2 in Week 7. Deadline to select a group is 4th February 5pm**
 - All students are expected to sign up for a project group on QMplus promptly. You do not need to wait to discuss with friends or classmates before joining a group.
 - Please note:
You may join any group with the remaining places.
Not everyone will work with friends, and that is absolutely fine.
The teaching team will allocate any students who have not signed up and will fill any groups with no members.
To summarise: go directly to QMplus and sign up to a group as soon as possible.
 - **Groups can only be formed with students from your assigned tutorial group. The MO does not have the authority to move students between tutorial groups.**
 - This module reflects real-world teamwork, so you are expected especially at Postgraduate level to work with new peers, not only with friends.
 - Requests to change tutorial groups **will not be accepted** on the basis of friendship.
 - If you have extenuating circumstances (e.g. well-being concerns, caring responsibilities, part-time work conflicts), you may submit a request via ASK QM and let the MO know. Approval is subject to QM policies and not guaranteed.
 - Do not delay group formation by waiting for students from other tutorial groups; this will affect the start of your group work and weekly log submissions.
 - If you have no specific group preference, please assign yourself to any available group on QMplus. The MO will ensure that your group has sufficient active members.
 - The teaching team will not remove students from groups because others want to work only with friends.
 - **By the end of Week 6 (Friday), if you have not yet joined a group, the teaching team will automatically assign you to one.**
 - **During weeks 2-6 it is important that you remain within your assigned tutorial group and thereafter**
-

ENGAGEMENT MARKERS FOR THE MODULE & EARNING INDIVIDUAL XP POINTS TO DEMONSTRATE ENGAGEMENT

As part of this module, we use the Level Up plugin on QMplus to make engaging with content fun and interactive, while helping you track progress through XP points. This supports all students, especially postgraduate learners, engaging remotely, neurodiverse students benefiting from flexible methods, and international students needing evidence beyond attendance. It equips the MO with clear data to defend your engagement if requested by the immigration compliance team.

Engagement Monitoring Benefits

Level Up records weekly XP from activities like reviewing slides, forum posts, quizzes, and submissions, per QMUL's Student Attendance and Engagement Policy and UKVI rules. The MO can present your XP totals to show active participation, e.g 'While X lectures were missed, the student earned Y XP weekly via core activities'. This builds a compassionate, evidence-based case.

Support for Diverse Learners

It's ideal for visa students to prove genuine engagement, PG students with commitments, and neurodiverse learners using low-pressure options. Students are still expected to attend lectures and tutorials where possible and **lack of tutorial attendance impacts peer evaluation negatively.**

How Does It Work

The Level Up plugin rewards your participation and effort by awarding Experience Points (XP) for completing weekly module activities. Here's how it works and how it will support you: These XP points will be taken into account to ascertain your engagement with the module and also for the grading of CW2

How You Earn XP

Each week, you will have the opportunity to earn XP by completing the following module activities and the activities that count towards XP points will be clearly marked on QMplus

with the XP icon

Weeks 1-6

- **Reviewing Weekly Lecture Slides**
- **Weekly Tutorial Activity (Reading Quiz)** Complete these exercises in person at the tutorial and have it marked by the module team to earn points. When you attend the tutorial and complete the reading quiz, show that you have completed it then the demonstrator will mark it on QM+. This will then automatically award you XP points.
- **Weekly In-Person Forum Posts** — During the second half of the tutorial the lecturer will lead a discussion, and students will discuss the content and submit an answer/thought on the weekly forum discussion. Submitting a reply or starting a discussion on each week's forum will enable each student to gain XP points.
- Attending Lecture Sessions and Tutorial Sessions
- Signing up to a group for CW 1 in Week 5
- Completing the module feedback in week 4

Weeks 7-12

- **Reviewing Weekly Lecture Slides**
- **Forum Post** — Posting on the weekly forum post (based on your lecture learning)
- Attendance in Tutorial
- **Submission of Weekly CW2 Logs 1-5** — Students will discuss their progress as a group and submit their progress in the weekly logs. By each student submitting the log you will have the opportunity to earn XP points.
- **Completing the module feedback in week 12**

The more you engage with the module, the more points you'll accumulate, bringing you closer to earning badges that reflect your achievements. For information on the points required to unlock each level and the maximum points that can be earned at each level, see the Level Up information.

This module focuses on monitoring engagement, not attendance alone. Therefore, if a student engages well with the module, it is expected that they will earn individual XP points. For example, missing a lecture or tutorial is not necessarily a problem, as the student still has

opportunities to demonstrate engagement by completing tasks that contribute to their XP score and progression through the levels.

Students who engage actively with the module will advance to higher levels and earn the corresponding badges. **In Week 12, the top 10 students with the highest XP points will receive a certificate of achievement. When you approach one of the lecturers for a reference, they may review your XP level to help determine your level of engagement with the module.**

XP points that you automatically get when you do the following activities

Level	Level Name		Activities	XP	XP needed for Level Completion
1	Corporate Bot Guardian		Attendance	10	15
			Reviewing Lecture slides	5	
2	Eco-Sentinel		Attendance	5	60
			Reading Quiz	50	
			Tutorial discussion forum post	5	
			Reviewing lecture slides	5	
3	AI Insider		Attendance	5	
			Reading Quiz	75	
			Tutorial discussion forum post	5	
			Reviewing lecture slides	5	
4	Creator Consent Crusader		Attendance	10	
			Reading Quiz	100	
			Tutorial Discussion Forum Post	5	

			Share module feedback	30	
			Reviewing lecture slides	5	
5	Work Wisdom Warrior		Attendance	10	
			Reading Quiz	125	
			Tutorial discussion forum post	5	
			Reviewing Lecture slides	5	
			Sign up to a group	40	
6	Bias Slayer Supreme		Attendance	10	
			Reading Quiz	175	
			Tutorial discussion forum post:	5	
			Reviewing Lecture slides	5	
7	Ethic Reflector Elite		Attendance	15	
			Lecture slides	5	
			Post on Forum:	5	
			CW Log submission:	200	
8	Regu- Legend Global		Attendance	15	
			Lecture slides	5	
			Post on Forum:	5	
			CW Log submission:	240	
9	Gen-Guru Insider		Attendance	15	
			Lecture slides	5	

			Post on Forum:	5	
			CW Log submission:	260	

10	Data Guardian Pro		Attendance	15	
			Lecture slides	5	
			Post on Forum	5	
			CW Log submission	280	
11	AI Ethics Avenger		Attendance	15	
			Lecture slides	5	
			Post on Forum:	5	
			CW Log submission:	300	
12	Responsible AI-Ranger		Reviewing lecture slides:	5	
			Post on Forum:	5	
			CW Log submission:	320	
			Feedback on Module:	100	

13	Blade Runner Sentinel		When you complete level 12
14	Matrix Oracle		Highest XP students receive a certificate

In week 12 the students who get the highest XP points will receive the following certificate to acknowledge their engagement

CERTIFICATE

Of Achievement

Queen Mary
University of London
1785

This Certificate is awarded to

.....

*for their engagement and progress in ECS7025p
[Ethics, Regulation and Law in Advanced Digital
Information Processing 2025/26] via the Level Up XP
Enhanced Student Engagement initiative 2026.*

SESSION OUTLINE

Week	Date	Lecture Topic	Tutorial (Fridays)	Assessment
Week 1	28 January 2026, 4-6pm	Introduction to the module, setup/housekeeping (Mahesha – 20 min) - Ethics of AI companies/chatbots (Tina)	No tutorial	—
Week 2	4 February 2026, 4-6pm	Environmental Impact of AI: • Carbon and water footprint of data centres • Knowledge "pollution" by AI-generated content	Get your reading quiz marked (XP points for engagement) In-person small group discussion and submitting reply in forum (XP points for engagement)	Formative Assessments during tutorials
Week 3	11 February 2026, 4-6pm	Guest session: Emma Higham, Product Manager & Safe Search, Google	Get your reading quiz marked (XP points for engagement) In-person small group discussion and submitting reply in forum (XP points for engagement)	Formative Assessments during tutorials
Week 4	18 February 2026	Ethics of Gen AI: - Rights of creators whose work is used without permission/Compensation - Deepfakes and consent	Get your reading quiz marked (XP points for engagement) In-person small group discussion and submitting reply in forum (XP points for engagement)	Formative Assessments during tutorials

Week 5	25 February 2026	AI, Work and Society - De-skilling of humans - Automation and human work-life	Get your reading quiz marked (XP points for engagement) In-person small group discussion and submitting reply in forum (XP points for engagement) Enrol in a group for CW2 (via QM+)	Formative Assessments and time to work on CW1 during tutorials
Week 6	4 March 2026	Bias in AI Systems: • Fairness, equality • Addressing algorithmic bias and discrimination	Get your reading quiz marked (XP points for engagement) In-person small group discussion and submitting reply in forum (XP points for engagement)	Formative Assessments and time to work on CW1 during tutorials
Week 7	11 March 2026	Review & Feedback Session No lecture (tutorial attendance mandatory)	Dissection of Group Assignment at in-person tutorial Submission of Log 1	Formative Assessments during tutorials
Week 8	18 March 2026	Global Regulation Landscape, Human Rights and AI, and Frameworks 5-6pm: Human Data specialist- Goolge DeepMind	Level Up Experience Points Submission of Log 2 Activity to be done in the in-person tutorial	Submission of CW1: 20th March, 5pm

Week 9	25 March	Guest Session: Head of AI, Globant (Juan Murphy)	Level Up Experience Points Submission of Log 3 Activity to be done in the in-person tutorial	Formative Assessments during tutorials
Week 10	1 April 2026	Guest Session: Ayub Hanif, Executive Director, Head of European Quantitative Strategy, J.P.Morgan	Holiday on Good Friday	
Week 11	8 April 2026	4-5pm: UNESCO AI RECOMMENDATIONS, OECD& COUNCIL OF EUROPE AI RECOMMENDATIONS 5-6:15pm: Guest Session: Global Data Responsible AI	Level Up Experience Points Submission of Log 4 Activity to be done in the in-person tutorial	Formative Assessments during tutorials
Week 12	15 April 2026	4-5pm: ICO Guidelines, Data Protection & GDPR 5-6pm: Rish Nadeswaran, Director, Data Governance & Transformation, Citi Announcing the XP winners	Level Up Experience Points Submission of Log 5 Activity to be done in the in-person tutorial	

CW2: Group Assignment (50%)

Submission deadline (Report): **11th May 2026, 5pm**

CW2: Group Assignment (Individual Defense 'Showing the Person Behind the Report')

Pre-recorded Video submission deadline: **12th May 2026, 5pm**

TUTORIAL STRUCTURE

Week	Date (Friday)	Topic/Session
Week 1	30 January 2026	No tutorial
Week 2	6 February 2026	Attendance taken Small briefing from lecturer Reading quiz to be completed and marked by demonstrators Lecturer-led small group discussion and post on forum <i>Reading quiz does not carry any marks towards your final module but doing it in the tutorial and submitting it for immediate marking will earn your XP points to demonstrate engagement</i>
Week 3	13 February 2026	Attendance taken Small briefing from lecturer Reading quiz to be completed and marked by demonstrators Lecturer-led small group discussion and post on forum <i>Reading quiz does not carry any marks towards your final module but doing it in the tutorial and submitting it for immediate marking will earn your XP points to demonstrate engagement</i>
Week 4	20 February 2026	Attendance taken Small briefing from lecturer Reading quiz to be completed and marked by demonstrators Lecturer-led small group discussion and post on forum <i>Reading quiz does not carry any marks towards your final module but doing it in the tutorial and submitting it for immediate marking will earn your XP points to demonstrate engagement</i>

Week 5	27 February 2026	Attendance taken Small briefing from lecturer Reading quiz to be completed and marked by demonstrators Lecturer-led small group discussion and post on forum Time to work on CW1 and ask questions about it <i>Reading quiz does not carry any marks towards your final module but doing it in the tutorial and submitting it for immediate marking will earn your XP points to demonstrate engagement</i>
Week 6	6 March 2026	Attendance taken Small briefing from lecturer Reading quiz to be completed and marked by demonstrators Lecturer-led small group discussion and post on forum Time to work on CW1 and ask questions about it <i>Reading quiz does not carry any marks towards your final module but doing it in the tutorial and submitting it for immediate marking will earn your XP points to demonstrate engagement</i>
Week 7	13 March 2026	Attendance taken Students sit in groups for Group Assignment Briefing by lecturer Students plan CW2 and submit the weekly log on QM+
Week 8	20 March 2026	Attendance taken Students sit in groups for Group Assignment Briefing by lecturer Students work on Group Assignment and submit the weekly log on QM+
Week 9	27 March 2026	Attendance taken Students sit in groups for Group Assignment Briefing by lecturer Students work on Group Assignment and submit the weekly log on QM+

Week 10	3 April 2026	Good Friday – No sessions
Week 11	9 April 2026	Attendance taken Students sit in groups for Group Assignment Briefing by lecturer Students work on Group Assignment and submit the weekly log on QM+
Week 12	16 April 2026	Attendance taken Students sit in groups for Group Assignment Briefing by lecturer Students work on Group Assignment and submit the weekly log on QM+

SPECIAL SESSIONS GEARED AT ASSESSMENTS

- **Week 2:** Online drop-in session with MO to ask a question about the module and support. Since there will be no tutorials on 30th January, the MO will hold an online drop-in session from 11-1. The link will be shared via module announcements
 - **Week 4:** Online Wellbeing drop-in session with MO to ask a question about the module and support
 - **Week 7:** CW2 Assignment dissection workshop in person during tutorial time
 - **Week 13:** Drop-in Session online to show drafts of Group Assignment (optional)
-

WEEKLY (WEEKS 7-12) PROJECT MANAGEMENT LOGS (COUNTS TOWARDS XP POINTS AND MARKING)

Given that this is MSc, it is designed to strengthen your employability and professional skills, and adopts an approach aligned with the Queen Mary University of London (QMUL) Graduate Attributes, particularly in developing collaboration and leadership, effective communication, ethical awareness, and self-management.

CW2 has been structured to help you gain key employability experiences, including working collaboratively with peers you may not have worked with before, forming collegial and professional relationships to achieve shared goals, and developing resilience when navigating the challenges of group work. You will also practice seeking guidance from the Module Organiser when required and build essential project management and time management skills—attributes that QMUL identifies as central to graduate employability and lifelong learning.

The module also emphasises ethical and professional responsibility. You will develop your ability to work fairly within a group by contributing effectively, respecting deadlines, and avoiding disengagement or unequal workload distribution. It also encourages reflection on group dynamics, ethical collaboration, and managing conflict constructively with the support of the MO when difficulties arise.

To ensure shared accountability, a project log will be maintained throughout the module. This log allows each group member to record contributions, track progress, and reflect on the overall project process. You are expected to engage actively in weekly discussions so that you remain familiar not only with your own section but with the entire report and its key findings. The examining team expects all students to demonstrate a full understanding of the project and its insights, reflecting the QMUL Graduate Attribute of being "an independent and reflective learner who takes responsibility for their own development." The weekly project log will therefore help ensure that all members contribute meaningfully, take responsibility, and demonstrate the integrity and accountability expected of a QMUL graduate.

To support fair contribution and engagement in Group Assignment (CW2), each group must complete a weekly one-page **project management log and submit it via QM+**. These logs help determine the individual component of the CW2 mark for each group member and how well the group worked as a team. These logs do not carry any weekly marks but will be considered for the grading of the group assignment to understand how the group worked and how well each member was accountable.

Project Management Log Schedule

(Submitted by Friday of that week ideally)

- Log 1: Week 7
- Log 2: Week 8
- Log 3: Week 9
- Log 4: Week 10
- Log 5: Week 11
- Log 6: Week 12

Key Points

- Weekly logs count towards individual engagement (XP points) and will inform marking of CW2.
 - You will fill in the log as a team but reflect on what you could have done differently. The log needs to be uploaded by each member of the team (not just by one person). Therefore, each group member must submit the log individually on QMplus, even if it is completed collaboratively. This will then record XP points and engagement for the student
 - Logs are formative but will be used as evidence when allocating the group mark and individual marks.
 - Good practice is to complete and upload the log during the tutorial. It is considered good practice for your group to complete the project management log during each tutorial session. While the weekly logs have a formal submission date, this should not be viewed as a strict deadline in the same way as assignments. Groups that are working efficiently, with clear communication and accountability among members, will typically find it manageable to submit these logs on a weekly basis. If your group is unable to submit the log collectively, individual members are encouraged to complete it independently. This is a valuable opportunity to reflect on your own contributions and awareness of different aspects of the project.
 - All members of the group need to attend tutorials in person.
-

FORMAT OF READING QUIZ WEEKS 2-6 (FORMATIVE)

Students will read the article relevant to the quiz before the tutorial and this article will be made available in the weekly content.

- **Pre-Tutorial Preparation:** Read the assigned article before your next tutorial and prepare to answer 10 questions on it.
- **Purpose of Quiz:** Builds habit of reading leading papers, understanding key debates, and forming your personal perspective. These directly support module coursework (CW).
- **Tutorial Method:** Complete the quiz using pen and paper (paper quiz will be provided during tutorial, but you must bring a pen or pencil).
- **Marking Process:** Each reading quiz will be worth 10 points. Students need to earn at least 5 points on it in order to gain XP points.
- **This activity is a formative exercise and as such ECs do not apply.**

Format of the Tutorial Group Discussion and Submitting in the Forum (Weeks 2-6, Formative)

- The second half of the tutorial will follow this structure:
 - The lecturer will first lead a group discussion on the topic.

- Students will then break into small groups for further discussion.
- One member from each group will start a discussion thread in the *Weekly Forum Submission* (found in that week's QMplus content).
- The remaining group members will reply to that thread—either agreeing with the initial post or adding further perspectives.
- Each individual reply in the thread will earn XP points, reflecting engagement and participation.

ACADEMIC MISCONDUCT FOR ASSIGNMENTS IN THE MODULE

When we begin marking your work if the teaching team has any grounds for suspicion that your work has not been done by you or has been plagiarised, the following will take place.

Initial Meeting

- You may be invited to a short 10-minute meeting (online or in person) to discuss specific concerns about your submission. This meeting will be with your MO and an independent academic
- You will receive an individual email explaining that there are concerns and giving you a date and time (usually within a week).
- In the meeting, you will be shown the evidence and asked whether you accept or refute the allegation. You may be asked to explain the different sections in your submitted work as well.
- If the explanation is accepted and there is no case to answer, the matter will be closed with no further action.

Referral to School Process

- If you do not attend the meeting, admit misconduct, or the evidence is considered compelling, the case will be referred into the school academic misconduct process.
- The case, with supporting evidence, will be formally reviewed and may be considered either at School level or referred to a central university panel, depending on seriousness.
- You will be informed through the university system and given an opportunity to respond to the allegation.

Please read the QMUL Academic Misconduct Policy:

<https://www.qmul.ac.uk/governance-and-legal-services/student-appeals/academic-misconduct/>

COURSEWORK 1 (CW1): INDIVIDUAL ASSIGNMENT

Part A: Interview with a Human Stakeholder (40%)

Background

The first principle of the ACM Code of Ethics directs computing professionals to "contribute to society and to human well-being, acknowledging that all people are stakeholders in computing." We could replace 'computing' with 'AI' and this statement would be equally true.

For this assignment you will identify a friend, relative, or acquaintance who is willing to be interviewed about their everyday use of AI. You should pick someone who does not have a technical job or background. If they regularly use AI in some form and they're aware that it's AI, they qualify as an interview subject.

Overview

To fulfill this assignment you will do the following:

1. Identify a subject to interview about their use of AI
2. Provide information to them about their participation and collect a signed consent form from them
3. Conduct a brief interview (15-20 minutes long)
4. Write a paper 2 to 3 pages in length highlighting themes of that interview
5. Submit the audio recording, paper, and ethics protocol documents as deliverables.

Ethics Protocols

After you have identified your interview subject, you must conduct your interview following Queen Mary ethics protocol:

1. Give the subject a Participant Information Sheet (to be provided) containing all the relevant details of the interview.
2. Give the subject a Consent Form (to be provided) containing all relevant details of their participation in the interview and obtain a copy (digital or physical) signed by them.

Technical details about how to conduct the interview and store the resulting files safely and securely will be provided later in the assignment directions.

Interview Questions

Once you have followed the ethics protocol, you're ready to interview your subject. You should ask them all the following questions:

- Tell me about how you use AI.
- How do you feel about AI?
- What do you think AI is better at than humans?
- What do you think humans are better at than AI?
- If you could talk with the people who build AI, what would you want them to know?
- Is there anything else you want to say regarding AI that I haven't asked you about?

Best Practices for Interviewing

1. Introduce yourself (if you don't know them well) and tell them what this assignment is about. Confirm that you've received their signed consent form and give them an opportunity to ask questions.
2. Tell them that you're recording the conversation only for the purposes of the assignment.
3. Ask a question, listen closely to their answer, and then ask a follow-up question if they don't say much. Good generic follow-up questions include:
 - "Can you say more about that?"
 - "I want to make sure I understand. Can you explain that a bit more?"
4. Give them time to think and answer; don't immediately fill a silence with chatter. Try to listen more than you talk.
5. Make sure you ask them all the questions listed above, but feel free to let the conversation go in another direction if it's still relevant to the assignment.
6. At the end of the conversation, share your contact details (e-mail is sufficient) with your interview subject, and invite them to contact you if they have questions or concerns.
7. Thank them for their time and offer to send them your write-up of the interview if they're interested in seeing it.

Guidelines for Interview Notes and Paper

Soon after completing your interview, you should listen to the recording and make notes about the major themes of the conversation. Pay close attention to especially interesting things they said and write these down verbatim (exactly as they said them). Next, write a paper in which you answer the following questions.

Introduction:

Who is this person? How do you know them? How old are they? What is their job?

Body:

How often do they use AI, and what do they do with it?

What are their most significant feelings about AI?

What did they say about AI vs humans?

Conclusion:

What's your reaction to this conversation? What did it make you think about?

Your paper should consist of 5 to 7 paragraphs, with complete sentences and proper punctuation. Do not just list each question and then paste their answer to it; tell a story about the conversation that flows logically and highlights the most important observations or thoughts they had. You should include at least two direct quotes (verbatim) of comments your subject made. You may paraphrase the rest of what they said.

Submission Directions

Your paper must be between 1,000 and 1,500 words long, formatted in 12 point Times or Times New Roman, double-spaced, and saved as a PDF. Your name, the name of the assignment, and the date of submission must appear in the upper left corner of the first page, single-spaced.

Guidelines Regarding Use of AI

We strongly recommend that you use only your human brain and writing ability to complete this assignment. There is no benefit to using AI for any part of this work because, as you'll see in the marking criteria (to be shared along with the full assignment), you will earn higher marks for imperfect human work than you will for chatbot output with zero errors. We expect many of you to be writing in English as a foreign language, and we do not want you to use an AI tool to standardize your writing. We want to 'hear' your unique human voice and the voice of your interview subject in this paper.

Deliverables

(This is an overview; follow specific submission directions on QM Plus)

1. Audio recording of interview
2. Write-up of interview
3. Completed and signed Participant Information Sheet
4. Completed and signed Consent Form

Part B: Identify bias in an AI tool (40%)**Background**

Most AI tools are built using training data, such as images for classification or text for a large language model. The characteristics of that data can shape the functionality of the tool and its relative accuracy for different end users. Bias in AI tools is often a result of overrepresentation or underrepresentation of particular contents in the training data.

In this assignment you will perform an experiment in which multiple English-speakers with different accents attempt to use a voice-to-text tool. By comparing the output of the tool across different users and its relative accuracy in interpreting their spoken words, you will reveal an aspect of the tool's bias and gain insight regarding its training data.

Overview

To fulfill this assignment you will do the following:

1. Choose a voice-to-text tool that is accessible via your smartphone or laptop.
2. Identify 5 people you know who speak English with 5 different accents.
3. Ask them to speak a specific sentence (details below) into the tool.
4. Take screen captures of the resulting text and save them as images.
5. Analyse the accuracy of the voice-to-text tool for the 5 different users.

Specific directions

Choose a voice-to-text tool that is accessible on your phone or laptop. This may be a dictation tool that is already installed on your device, or a voice recognition tool that you can download.

Next, identify 5 people who speak English with different accents. Make note of each person's gender and their native language; you will include these details in your write-up. You must be able to speak with these people in person – not via phone or video chat – because they will need to be able to speak directly into the microphone of your device. As you 'collect' 5 different accents, you may ask your fellow students during tutorial (time will be set aside for this task). You may also include your lecturer as an American accent if you like. 😊

Ask each of your five English speakers to read this sentence into your device, at their usual speaking speed:

Please call Stella, ask her to bring six spoons of fresh snow peas, five thick slabs of blue cheese, and a small plastic snake for the kids.

It's not necessary to record audio of this; you are only meant to capture the text output.

DO NOT make any corrections to the resulting text, and DO NOT accept any corrections suggested by your device. Take a screenshot of the tool's text output and save it as an image in your device. You will submit these five images as part of your deliverables for the assignment.

Analysis and write-up

Once you have collected all your data, look carefully at the text output for each person's spoken sentence. Make note of **all** errors and count them up for each speaker. Input your data into a spreadsheet and think creatively about the best way to communicate your results in a chart. In a few paragraphs, describe your experiment and your findings, and identify which of the 5 speakers for whom the tool performed most accurately.

Guidelines Regarding Use of AI

The voice-to-text tool you choose to experiment with is obviously an AI tool in itself. In your analysis and presentation of the data you collect, you may experiment with *additional* AI tools (Copilot or other) to help you format your resulting data in an effective way. Keep in mind that you must also engage your human brain to ensure the data are represented accurately and in a way that will make sense to the humans who will read and mark your work.

Deliverables

One write-up 5 to 7 pages in length, formatted in 12 point Times, double-spaced, saved as a PDF, and titled according to specific submission directions given on QM Plus.

The write-up should contain:

- Introduction and identification of 5 speakers
- Identification of the voice-to-text tool you chose
- Screenshots of the text output for each speaker, captioned with their gender and native language
- Chart of results accompanied by a clear explanation of your interpretation of them
- An acknowledgment of any and all AI tools used and what purpose they served, or a statement that none were used

Part C: Reflection on interview and experiment, and connection with UK Data and AI Ethics Framework (20%)

Assignment directions

First, reflect critically on the interview and the voice-to-text experiment you did, and answer the following questions. Incorporate specific examples from the interview and experiment output in your responses.

1. How is AI helping people?
2. How is AI constraining or harming people?
3. What are some of the differences (in design, function, training data, or other) between helpful or useless/harmful AI?

Next, read the UK Government's Data and AI Ethics Framework (<https://www.gov.uk/government/publications/data-ethics-framework/data-and-ai-ethics-framework>). Identify at least two sections of this guidance that you think are most important in developing AI that helps people rather than constraining or harming them.

Write one short (3 to 4 sentence) paragraph on each section, applying them to your findings in the interview and the experiment.

Deliverables

A paper 1 to 2 pages in length, formatted in 12-point Times, double-spaced, saved as a PDF, and titled according to specific submission directions given on QM Plus.

COURSEWORK 2 (CW2): GROUP ASSIGNMENT (50%)

Group Assignment (Group Report & Individual Defense 'Showing the Person Behind the Report')

Deliverables:

- **Group Report:** 2500-3000 words – Submission deadline **11th May 2026, 5pm**
- **Individual Pre-Recorded Defense Video:** 'The Person Behind the Project: Showing Depth, Insight, and Authentic Learning (I know the work in my report)' – **12th May 2026, 5pm (3-7 minutes)**

In the age of Generative AI, examiners need to be confident that each student understands their own work (the thinking, process, and learning behind it). The video you will individually submit to, 'Person Behind the Project: Showing Depth, Insight, and Authentic Learning (I know my report well)' gives you the opportunity to demonstrate that understanding through a short 3-7-minute pre-recorded individual defense/speech.

This is **not** a group presentation but an **individual reflection presentation** to show that you understand the *whole* report not just the part you personally worked on. It helps ensure fairness by confirming that every student can explain the overall argument, key findings, and how the research connects across sections.

The focus is not on presentation style or slides (you may use them if you wish), but on authentic understanding i.e. how you approached the assignment, what insights you gained, how specific reading shaped your understanding, and how your thinking about responsible AI developed through the process. You may even just record a message for the examiner without slides.

Guidance for the Video 'Person Behind This Submission'

My Role in Our Group Report

Briefly describe what you personally worked on in Part A and/or Part B (example: literature search, framework selection, case evidence, writing specific sections, slides).

Explain one concrete decision **you made** (example: why you chose a particular framework, case, or source) and how it shaped the final group argument. At PG level we are not looking for reflections such as 'i used it because its reputable'. We need to see deep learning and understanding of whatever you say you found useful whether it be a piece you read or cited.

How I Applied AI/Data Ethics Frameworks

Name at least one framework or set of principles used (example: fairness, accountability, transparency, human rights–based, EU/UNESCO/UK guidance) and **explain, in your own words, how it was applied in the organisation case and/or the breach case.**

Give one example of how the framework helped you evaluate a trade–off, harm or tension, rather than just listing principles.

What I Learned About 'Responsible AI'

Identify 1 or 2 key insights you gained about what responsible AI should look like in practice (example: the importance of governance structures, stakeholder engagement, power and inequality, limits of principle–based checklists).

Connect at least one insight to something from a lecture or guest speaker (example: a case, metaphor, or tool they discussed).

How I Used (and Constrained) AI Tools in This Coursework

Honestly describe whether and how you used AI, for example, brainstorming questions, clarifying concepts, proofreading, or generating alternative perspectives.

Explain what you deliberately **did without AI** (example: choosing cases, interpreting evidence, linking frameworks, drafting key arguments) and how you checked any AI-supported content for accuracy, bias and relevance.

How This Shapes My Future Practice

Reflect on how this coursework has changed the way you think about using AI in your own academic or professional work (example: more critical about bias, more attention to power and context, clearer sense of your responsibilities).

Mention one concrete behavior or habit you plan to adopt in future when working with AI systems or data.

Although no marks are directly allocated to this video, it will inform the examiners' judgement on whether all group members receive the same grade or whether differences in understanding merit individual adjustments.

ASSIGNMENT OUTLINE

In groups of 4–5, you will complete a two-part coursework portfolio (equivalent to a 3000-word group report plus individual presentation). The work draws directly on material covered in the module and in guest speaker sessions, so attendance at these sessions is essential; elements of the assessment may explicitly reference cases, tools or perspectives discussed by guest speakers.

- **Part A:** Case study of an organisation's AI strategy, governance and ethics.
- **Part B:** Investigation of an AI or data ethics breach and its implications.
- **In both A and B:** Application of leading AI and data ethics frameworks across both parts, and reflection on what "responsible AI" should look like in your chosen context.

Part A: Organisation AI Ethics Case Study (40%)

Choose one organisation that makes substantive use of AI or advanced data analytics (e.g. public sector body, tech firm, healthcare provider, financial institution, NGO). Your group should:

- Briefly describe the organisation's main AI or data-driven initiatives (e.g. recommender systems, credit scoring, predictive policing, clinical decision support).
- Critically analyse the organisation's stated AI or data ethics policies, governance structures and practices (e.g. AI principles, ethics boards, impact assessments, audit mechanisms, risk management, stakeholder engagement). Your evaluation of their policies should be in line with leading frameworks and developments exposed during lecture or guest sessions. We would expect you to do your own research as well.
- Critically evaluate alignment between what the organisation claims (policies, principles, public statements) and what it does in practice (documented projects, controversies, media reports, regulatory findings where relevant). Again, it would be essential to reference ethical frameworks.
- Identify key ethical risks and benefits associated with the organisation's AI use, considering impacts on different stakeholder groups, especially those who may be marginalised or vulnerable.

Your analysis must explicitly reference at least one established ethical framework (e.g. EU trustworthy AI principles, UNESCO AI ethics principles, UK Data Ethics Framework, human rights based approaches, or other well-argued frameworks) and show how it illuminates strengths, gaps or tensions in the organisation's approach.

Part B: AI or Data Ethics Breach Investigation (40%)

Select a real case involving an AI or data-driven system where there has been a clear ethical controversy, failure or breach. This might involve, for example:

- Discriminatory or biased algorithmic decision-making.
- Misuse or non-consensual use of personal data in AI systems.
- Harmful or manipulative uses of AI-driven profiling, targeting or content generation.
- Significant transparency, accountability or safety failures in deployed AI systems.

N.B. International students – you may bring examples from your home country as well.

Your group should:

- Provide a concise narrative of what happened, who was involved, and the timeline of events. Ensure that you cite reliable sources.
- Analyse the technical and data aspects that contributed to the breach (e.g. training data issues, model design, deployment context).
- Examine organisational, legal and regulatory factors (e.g. governance failures, lack of human oversight, inadequate impact assessment, gaps in compliance).
- Evaluate the harms and risks for affected stakeholders and for wider society.
- Assess post-incident responses (e.g. apologies, policy changes, sanctions, legal cases) and critique whether these were adequate from an ethical standpoint.

Again, explicitly apply one or more ethical frameworks to structure your analysis, and compare the breached case to "good practice" principles you have encountered in the module and guest lectures.

Students, you will notice that across both parts, I'm asking you to demonstrate:

- Awareness of at least two leading AI/data ethics frameworks or sets of principles (for example: fairness, accountability, transparency, human-rights-based AI, values such as respect for persons/beneficence/justice, or published institutional or international AI guidelines).
- Ability to use these frameworks analytically rather than descriptively: not just listing principles, but showing how they help you evaluate real decisions, trade-offs and harms.
- Critical reflection on the limitations of principle-based approaches, including how power, context, and structural inequalities shape whose values are prioritised.

You are encouraged to integrate insights, cases and dilemmas raised by guest speakers when illustrating how frameworks do or do not work in practice. Attendance at guest sessions is therefore highly important. Therefore, you may want to ask good questions from the guest speakers so that you can use those insights in your group report and in your individual presentation.

Part C: Recommendations and Reflections (20%)

- Reflect on providing recommendations in the area of developing critical AI literacy, practising responsible use of AI tools in study and work, how one can attend to power and structural inequalities and your view on high human and AI-powered skills and how that synergy can be achieved.

Executive Summary or in the Appendix

Integrity/AI Requirements

- Mandatory "AI Use Declaration" section or appendix (what tools were used, for which tasks, and how outputs were checked/modified).
 - Clear guidance on acceptable AI uses (e.g. idea generation, editing) and prohibited uses (example: generating whole sections, fabricated references).
-

CW2 FURTHER INSTRUCTION

Deliverables and Format

Your group will submit:

- A written report (2500-3000 words, excluding references and appendices) integrating Part A, Part B and the ethical frameworks component.
- An individual 3–5-minute pre-recorded defence ("Person Behind the Project: Showing Depth, Insight, and Authentic Learning: I know my report well") speech designed to ensure that every member of the group demonstrates understanding of the *entire* report not just the part they personally worked on. It is common in group work for some members to focus narrowly on their own sections, while others develop a deeper understanding of the whole project. This speech/defence is therefore intended to prevent such imbalance by giving each student an opportunity to show that they fully grasp the report's overall argument/message, the key findings from each section, and how the research fits together.
- The speech is *not* about re-presenting the written content (which examiners can already read) but about demonstrating your analytical engagement and personal interpretation of the work. You should be able to discuss the main insights drawn from different sections, for example, the contextual research, the organisational analysis, the ethics breach case, and the application of ethical frameworks—and explain how specific readings informed your understanding. You may focus on questions such as: what were the key insights across sections? which reading had the most impact on your interpretation? How did theoretical concepts connect with the organisation's approach to AI? what ethical tensions or contradictions did you notice? how has this assignment shaped your own view of responsible AI practice?
- There will be no separate marks allocated to this defence and you are not required to use slides (though you may if you wish). However, your individual defence will play an important role in helping examiners determine whether all members of the group

should receive the same grade or whether differences in understanding merit individual adjustments.

- **This individual defence serves to demonstrate each student's understanding of the whole group report, not only the sections they directly contributed to.** During the short defence video, you are expected to show that you are familiar with all parts of the report and shed light on yourself as a learner. This does not mean reading out the entire report in your defence. The examiner is looking to see how involved you were in the group task and whether you have done the reading you claim you have. What we do not want is students not knowing other parts of the report because that was not their section. This will prompt all students to be fully engaged in all aspects of the CW2.
- For example, you can explain how the different parts of the report fit together into a coherent argument. This is to ensure that each student has been actively engaged with, and is aware of, the key insights of the report, and that there is clear evidence of metacognition and learning (for example, through critical reflection on what was learned, how thinking developed over time, and how this informs your recommendations). In addition, the presentation allows the examiner to see the specific insights you personally draw from the report, including your critical reflections on its key findings and your own well-reasoned recommendations for more responsible AI practice, pitched appropriately to an informed but non-expert organisational audience.
- You do not need slides for this section, and you may talk over your submitted report showing different parts as you speak.
- Marks will not be deducted for presentation skills, and the individual defence video will be used to aid marking of the group report.

Written Report Structure

The written group report should include:

- Clear structure with sections for the organisational case, breach investigation, and ethical frameworks.
- Referenced (via intext citations within the main body of the report) use of academic literature, policy documents and other credible sources. Use either Harvard referencing or IEEE format referencing.
- A short reflective section on the challenges of doing AI ethics 'for real' in organisational settings, drawing where possible on guest speaker insights and your group's own learning. **This can be done in the abstract or executive summary.**

Students are expected to engage actively with guest speaker sessions throughout the module, as these will provide lived examples of organisational AI practice, ethical tensions and governance strategies that will strengthen your analysis and may be directly relevant to specific elements of the assessment.

N.B. The group report will provide the starting point (base grade) for the group's mark.

If the examiner can see that one member of the group clearly does not have an understanding of the report, then it is unlikely that that member will receive the same grade as the rest of the group.

CW2 FURTHER INSTRUCTIONS FOR THE REPORT (REPEATED BECAUSE IT IS IMPORTANT)

- The CW2 report has a word limit of 2500-3000 words. This excludes the reference list/bibliography, tables, and diagrams. You may include a cover page, table of contents, and an abstract (up to half a page), which will not count towards the word count. Please note that if you include a conclusion, this will count towards the word limit.
- Please use Times New Roman, font size 12. Academic citation style should follow Harvard referencing. Any sources cited must be understood by the group; **you should be able to explain their contents and how they have been used in your report if examiners have questions about authenticity of the work or overuse of generative AI (e.g. including sources without verifying authenticity).**
- All parts of CW2 are to be completed in groups of no more than five members. Groups of fewer than five are not allowed. All members of the group needs to belong to the same tutorial group.
- If you wish to complete this coursework on your own, you may do so, but you must sign up to a group on QMplus where you are the only member and submit under that group. **You must also discuss this in advance with the Module Organiser (Mahesha). Students working alone must have a Student Support Summary from DDS, and in this case CW2 will be treated as an alternative assessment on DDS grounds, so appropriate DDS support must be in place. It is not advisable to attempt CW2 as a individual piece as it is designed for a group to complete collaboratively.**
- **Group responsibility: While it is acceptable for subsets of the group to focus on specific tasks, all members should contribute to each aspect in some way. All group members share responsibility for the accuracy and quality of the final report. If it was found that students have put undue pressure on their peers to include them in the submission when they have not contributed this would be a breach of the assignment guidelines. If a group jointly feels a member has not contributed, then they need to alert Mahesha as soon as possible NOT after the submission or few days before the submission.**
- The coursework is open-ended and does not typically achieve marks in the 80–100 range, which may be more common in programming-focused modules. Because there is no single right or wrong answer, there is almost always room for improvement or

alternative perspectives. Marks of 70 and above are reserved for outstanding work. A strong submission will include rich discussion of multiple patterns of interaction, clear and correct definitions of all terms from the literature with accurate examples, close attention to different aspects of the user experience, and carefully evidenced claims supported by references from the course reading without overstating conclusions. Academic judgement cannot be challenged.

- **This coursework is designed to be appropriately challenging for a PG level module and to prepare you for the ambiguity you will encounter in professional practice. Some aspects of the brief are deliberately left open rather than specified at a very granular level, so that you can exercise independent judgment, creativity, and critical thinking in how you interpret and respond to the task. If every step were prescribed in detail, groups would be guided toward identical approaches and outputs, and there would be little room to demonstrate your own critical thinking.**
 - If any member of your group has a SpLD cover note from DDS, please inform the Teaching Team or Module Organiser so that appropriate support can be put in place. Group members will not automatically receive the same mark. When determining individual marks, the marking team will consider:
 - Level of XP points showing engagement with the module
 - Project logs indicate weekly participation in discussion and completed work
 - Attendance at weekly group meetings
-

CW2 PROJECT LOGS TEMPLATE

CW2 Group Project Weekly Log

Module: _____

Group ID/Name: _____

Week Number: _____

Dates Covered: _____

1. Attendance

List who attended the group meeting(s) this week.

- Member 1: _____ Attended? ☐ Yes ☐ No
- Member 2: _____ Attended? ☐ Yes ☐ No
- Member 3: _____ Attended? ☐ Yes ☐ No
- Member 4: _____ Attended? ☐ Yes ☐ No
- Member 5: _____ Attended? ☐ Yes ☐ No

If no one attended just fill in your name only and do the reflection alone to fill in this form.

2. Work Completed This Week

Briefly describe what the group achieved towards CW2 this week (e.g. sections drafted, reading completed, analysis done).

3. Tasks and Responsibilities

Record what was assigned to each member for this week.

- Task: _____ Assigned to: _____
- Task: _____ Assigned to: _____
- Task: _____ Assigned to: _____
- Task: _____ Assigned to: _____

4. Action Plan for Next Week

What is the plan for next week? Include key tasks and who is responsible.

5. Areas for Improvement / Issues

Note any challenges, risks, or areas where the group could improve (e.g. communication, time management, uneven workload) and any steps agreed to address them. If a member did not attend the meeting reflect the impact of that on the group

6. I did not attend the group meeting this week and below is what I would do to ensure I contribute to the teamwork (fill in only if you miss the meeting that week)

Group Member Completing This Log: _____
Date: _____

***If a member misses a meeting and is unable to complete this project log collaboratively then you need to reflect on why you missed the group meeting and what you would do differently to catch up and rectify your contribution to the project**

Groups will complete the project log in discussion during tutorials lead by maybe a team leader but it's important that each member of the team uploads the log weekly to earn XP points for engagement.

Peer Evaluation Form (To Be Included in the Final Log Submission in Week 12 as point 6 or 7 in the form)

Criteria	Peer 1	Peer 2	Peer 3	Peer 4	Comments
Attendance at Meetings					
Preparation for Meetings					
Quality of Contributions					
Commitment to Deadlines					
Team Cooperation					
Total Score					

-
- At postgraduate level, it's important to develop the ability to give and receive peer evaluation and feedback constructively.
 - Many of you are already working in industry or preparing to move into professional or leadership roles, where these skills are essential.
 - In workplace settings, feedback is rarely anonymous professionals are expected to communicate openly, respectfully, and with accountability.
 - Being able to offer feedback thoughtfully helps improve collaboration, project outcomes, and team performance.
 - Receiving feedback positively demonstrates emotional intelligence, self-awareness, and a growth mindset qualities highly valued in senior positions. This is an essential skill in this module.
 - This exercise encourages you to practice professional dialogue, where you articulate your observations clearly and supportively.
 - Working collaboratively and transparently builds trust, empathy, and stronger team relationships.
 - It also helps develop your ability to reflect on your own contributions, identify strengths, and recognise areas for improvement.
 - **The goal is not to criticise but to enhance collective learning, share perspectives, and strengthen peer support networks.**
 - Engaging in open feedback also aligns with real-world professional standards, where constructive conversations drive performance and innovation.

FAQs

Module Communication

How do we contact the lecturers?

You can email lecturers directly.

I have a concern about the module. Whom should I contact?

You can email your concerns directly to the module organiser, Dr Mahesha Samaratunga or direct query to the lecturer who is doing the respective session.

How will the lecturers communicate important information?

The lecturers will send out module announcements from time to time, and it is expected that students will keep an eye out for module announcements.

Where can I find all the information for this module and assessments?

Students are strongly advised to read this module guide and raise any questions they may have directly with the module organiser.

Assignments, Grading and Support

Where can we find information on the assignments and marking criteria?

In the module guide uploaded on QMplus.

I'm struggling with my assignment; how do I access help?

Contact the respective lecturer who is overseeing the assessment however it would be best to contact the MO (Mahesha) as soon as possible to discuss support.

I have concerns about the grade and feedback I received for my assessment.

Contact the lecturer to arrange a one-on-one session to review your grade and feedback. Appeals against academic judgment are not permitted as per academic regulations.

For the assignments, do I have to use only academic articles?

No. Given the nature of this module, your reading will also include non-academic sources such as journal articles, publications of governing bodies, and relevant websites. However, anything that you cite, the understanding is that you have read it. You should not include any sources that you have not read (machine read does not count).

Before I submit my assignments, will I get to see my Turnitin score?

Yes, you can view your Turnitin score by submitting a draft to the submission area.

I have a problem with one of my group members. What can I do?

First, discuss the issue with your group. If unresolved, raise it with the MO as soon as possible.

For the group assignment, will all students in the group receive the same grade?

In most cases yes but the MO will check the individual defence to see if you know your report well.

A member of a group has put in an EC for the group assignment. How does this impact the rest of the group?

The rest of the group automatically gets an extension and will submit the work on the revised EC date.

If I need more formal feedback for my assignments, how do I request it?

You can get in touch with the respective lecturer directly who will then arrange a 15 min one-on-one session for further feedback.

Support for DDS, Students with SpLDs and Students from Diverse Cultural Backgrounds

I have an SpLD (Specific Learning Differences and Neurodiversity) cover note. Should I include this for CW1 and CW2?

It's up to you. If you prefer not to share it, inform Mahesha so that grading can be adjusted accordingly to ensure fairness. However, for the individual assignment you must include the cover note in your report.

I have DDS/SpLD cover note so can I opt out of working as a group for CW2?

Yes, you may opt out and work on CW2 on an individual basis, but this then needs to be first discussed with the DDS team before the school can approve a student to work on the CW2 on their own.

I have well-being issues and social anxiety, making it difficult to attend lectures.

Attendance is required for this core module. Please discuss this with Mahesha for support options such as access to lecture recordings and pre-organised check-ins. You can also contact DDS for additional support. However, this module tracks engagement and not just attendance. Ensure you earn XP points so that the lecturers can see you're engaging with the module despite low attendance.

Travel and Attendance

I must travel overseas during the semester and will miss some lectures and tutorials.

Inform Mahesha about your absence as soon as possible. Discuss the impact with your group for group assignments. Students who are on student visa status please discuss your absence

with the immigration compliance team. You may contact them via ASK QM. You may contact them via ASK QM.

END OF MODULE GUIDE
